SENSE

THINK

ACT

ENABLING SELF-DRIVING CARS

Better senses than the human driver.

Automation of driving decisions.

NXP

DOMAIN ARCHITECTURE CONSIDERATIONS

SOFTWARE

Dynamic, Partitionable,
and Reusable Software
Environment

Multi OS, Multi Supplier/Partner,
Hypervisor and Virtual Machine
Enabled, Full Middleware
Support

HARDWARE

High Performance
Without Complexity,
Scalable/Reusable, Cost
Competitive, Power
Conscious

SECURITY

Multi-layer, Updatable,
Symmetric and
Asymmetric Crypto
Support, Side Channel
Resistance

SAFETY

High Availability and
Fault Tolerance
(Fail Operational)

Provide Requisite Processes,
Support, Silicon, Systems,
and Software

SAFETY AND SECURITY AT THE HEART OF AUTONOMOUS DRIVING

NXP

System Safety

Absence of **unreasonable risk**
due to **hazards** caused by
malfunctioning behavior of
electrical or electronic **systems**

Why Safety Is Important For the Automotive Market

Legal – question of responsibility

Trust – knowing your car will do what it's meant to do

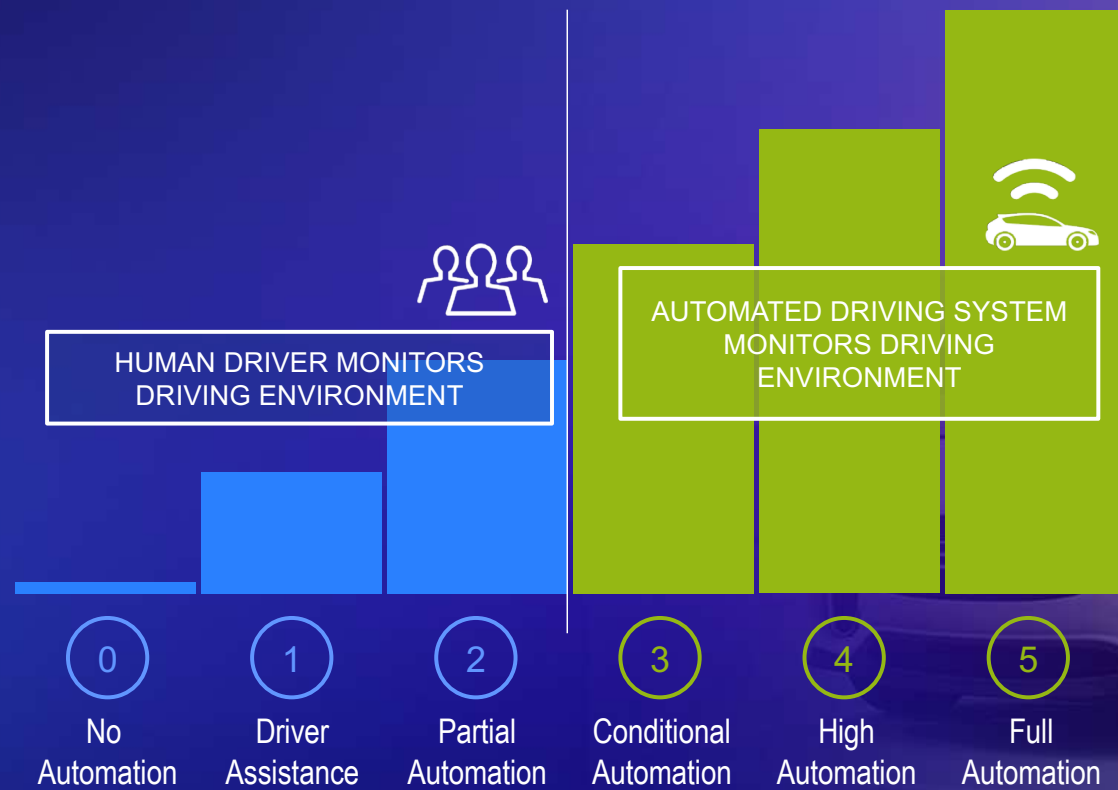

Standardization – platform consolidation and system harmonization

Trends – autonomous driving, electric vehicles

NXP

WHAT IS DRIVING SAFETY TODAY?

SAE standard J3016

NXP

RISING COMPUTING AND SAFETY REQUIREMENTS

Probabilistic

- Analyze Scenario
- Make Contextual Decision

Deterministic

- Initiate Safe Measure
- Fail Safe / Operational

Automated
Drive

Co-pilot

Collision
Avoidance

Self Parking

Lane Keeping

Collision Warning

Sign View

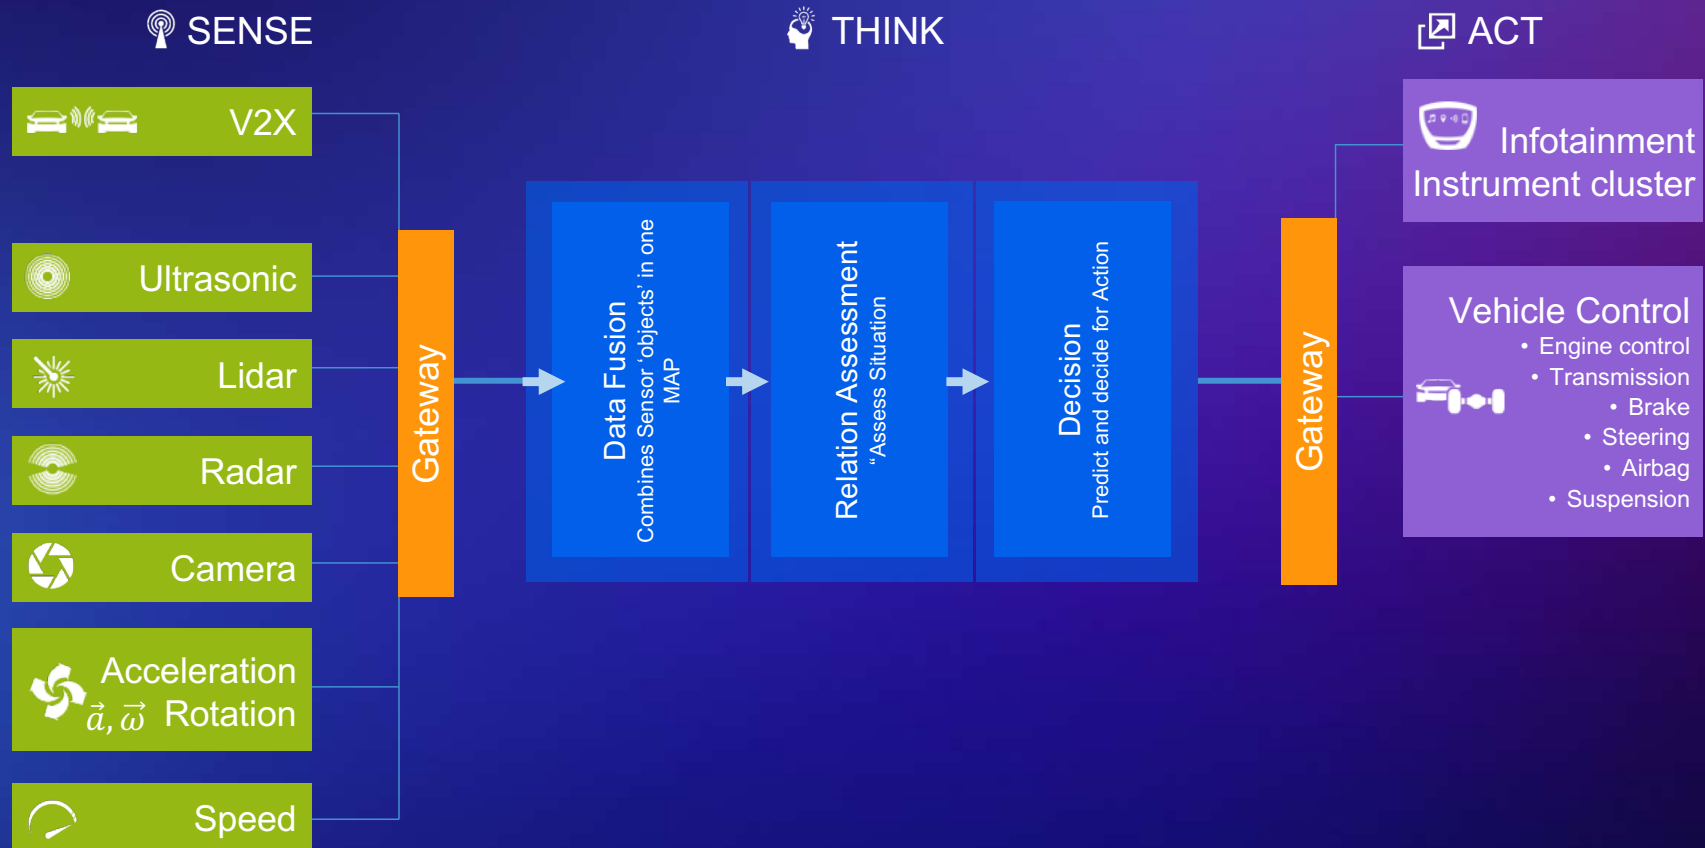

Super Computing

SAFETY AND MACHINE LEARNING (ML): FUNCTIONAL SAFETY

- “Traditional” Auto safety defined by standards (ISO 26262)
- Automotive Safety Integrity Level (ASIL)
- ML introduces COMPLEXITY in proving FUNCTIONAL Safety

Severity

How much harm is done?

Exposure

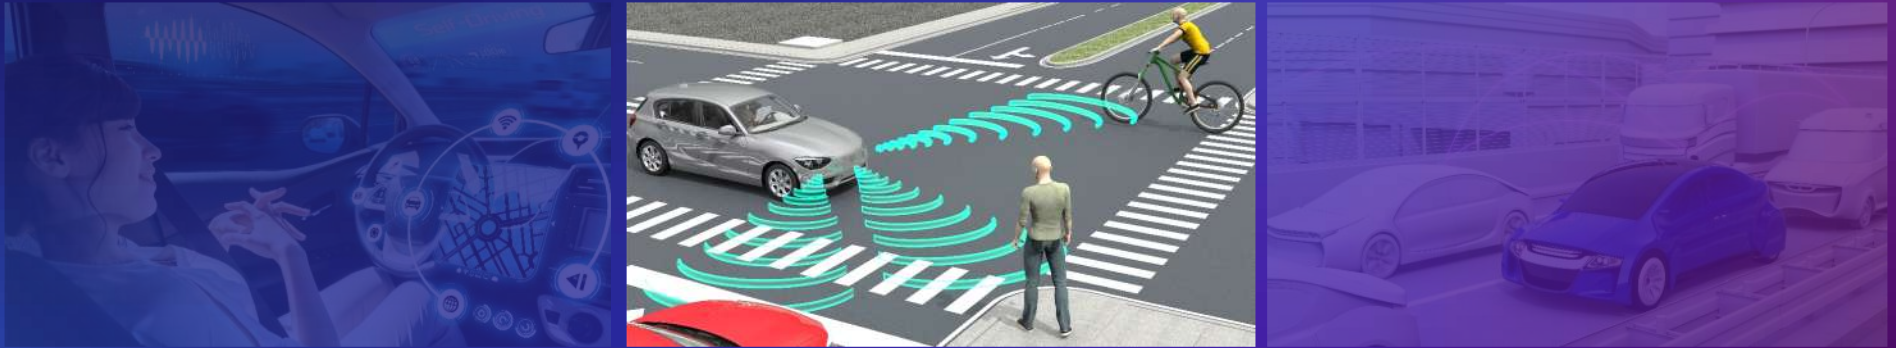

How often is it likely to happen?

Controllability

Can the hazard be controlled

SAFETY AND MACHINE LEARNING (ML): BEHAVIORAL SAFETY

- Learn to interact with non-automated vehicles and pedestrian – Driving Policy
- Predict the behavior of other Agents
- Predict dangerous or safety critical situation
- Follow the rules all the time? Break them in certain circumstance? When?

SAFETY AND MACHINE LEARNING (ML): ENVIRONMENTAL SAFETY

- Understand different driving environments: Highway, Rural, City
- React to levels of environmental threats: Rain vs. Flooding
- Passenger fatigue and emotional state

A few open hot debates

Sense - Think

Are end-to-end solutions really acceptable?

Is Deep learning is the only path?

Edge or Cloud?

What is the role of unsupervised learning?

A few open hot debates

Think - Act

Is reinforcement learning sufficient?

How much data is necessary for automated driving?

When and how can we certify safe decisions?

DID YOU KNOW?

>25

Vehicle hacks
published since 2015

1.4M

Vehicle recalled
in the largest
incident to date

Why hacking?

Valuable Data
attracts hackers

Car-generated data
may become a USD
750B market by 2030

Why is it possible?

High System Complexity
implies high vulnerability

Up to 150 ECUs per car,
up to 200M lines of
software code

Why now?

Wireless Interfaces
enable scalable attacks

250M connected
vehicles on the
road in 2020

SECURITY IS A **MUST-HAVE** FOR CONNECTED & AUTONOMOUS VEHICLES

SECURITY FOUNDATION FOR THE CONNECTED CAR

Protect privacy

Prevent unauthorized access

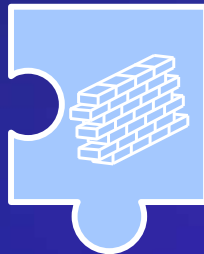

Increase safety

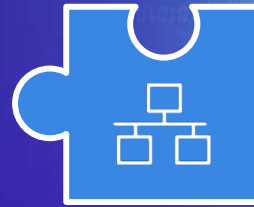

CORE SECURITY PRINCIPLES

Secure
External
Interfaces

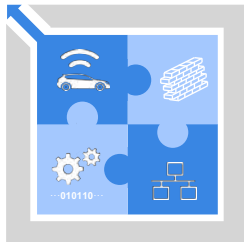

Secure
Domain
Isolation

Secure
Internal
Communication

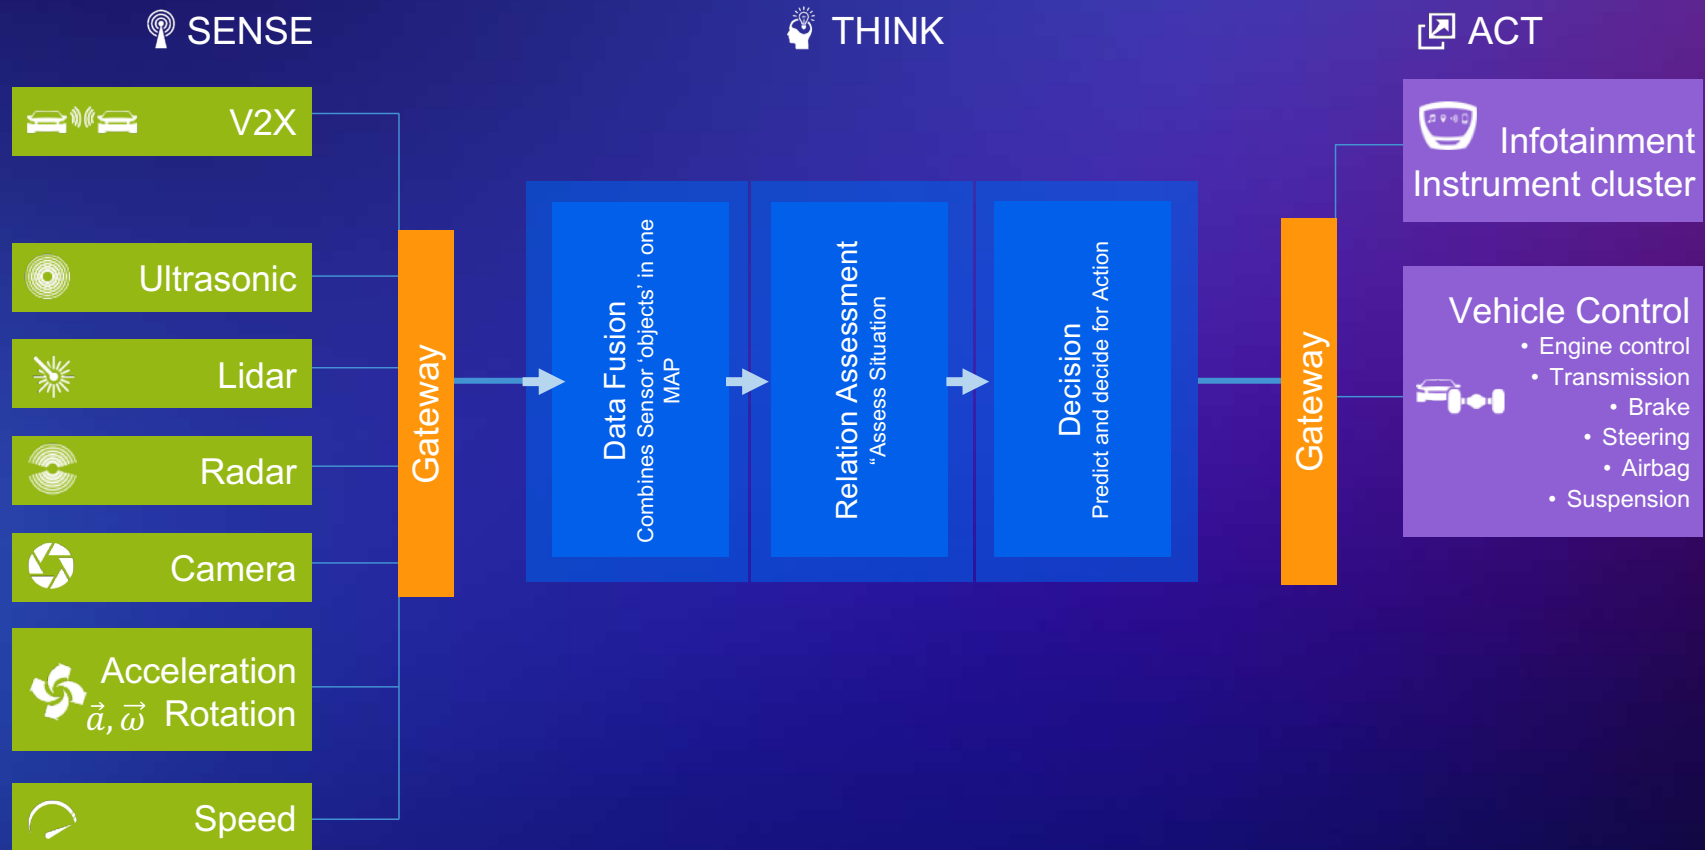

Secure
Software
Execution

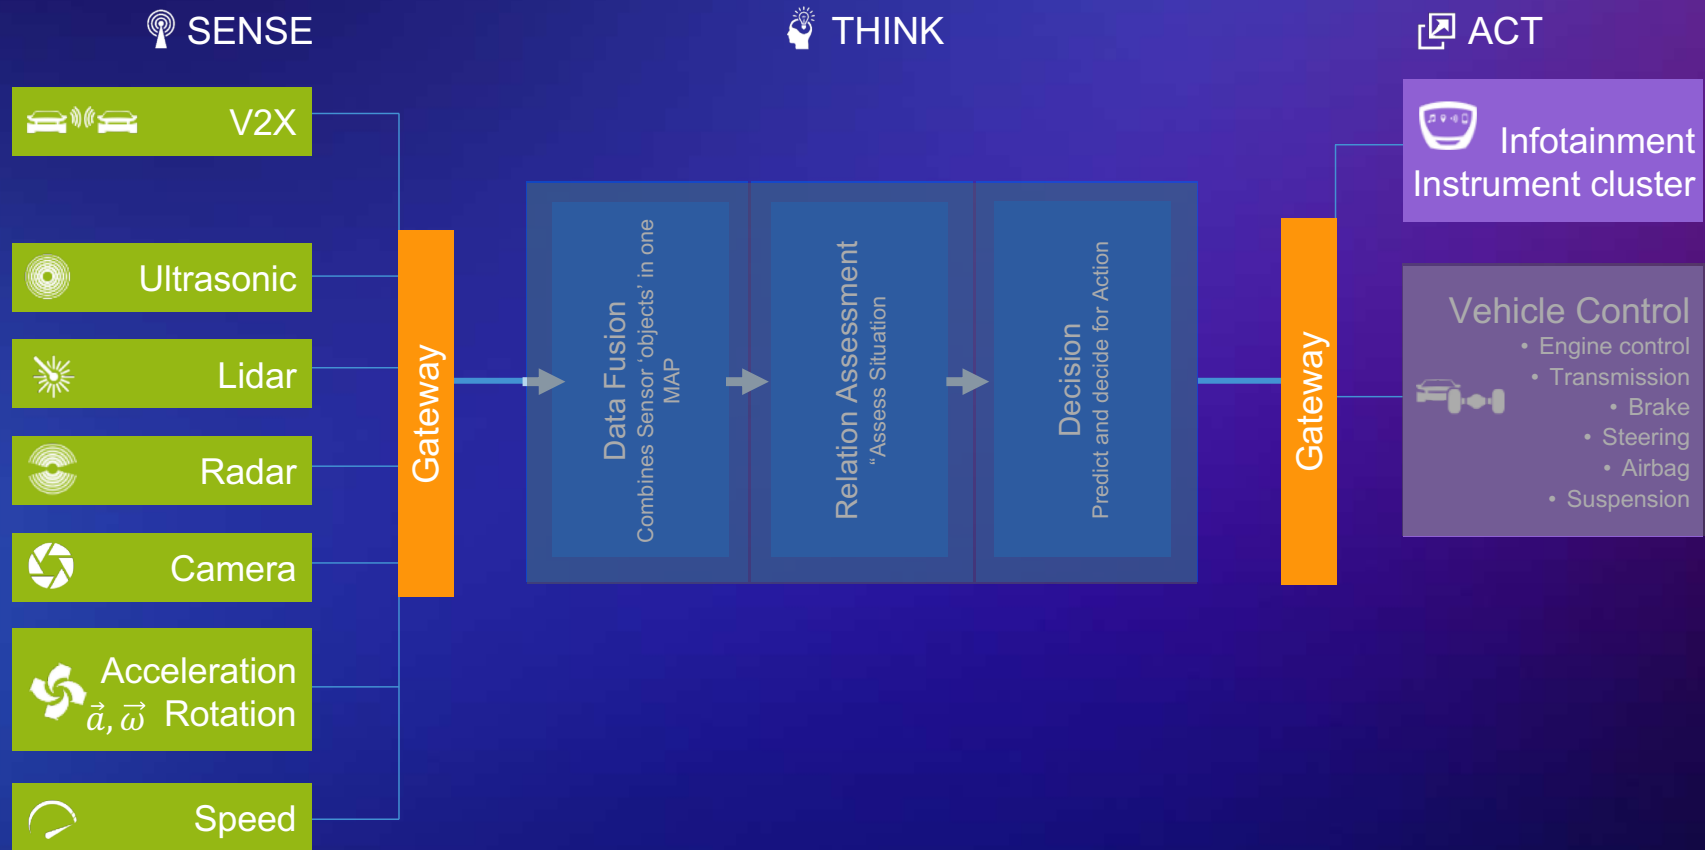

They need to be in place in **any** electrical and electronic network

- Regardless of the actual architecture and implementation
